Akari/Light Up: [Nikoli 2001]
— given square grid with some obstacles - some obstacles have a number - light illuminates like rook, up to obstacles - goal: place lights in blanks so that
- black space lit
- no lights light each other - satisfy numbers NP-complete by reduction from Circuit SAT: [McPhail 2005] - wire, turn gadgets
- split/negation gadget

> split & negation gadgets (via terminators)
- OR/XNOR gate
- crossover gadget: just XORs! Minesweeper: given square grid of numbers & unknowns & possibly mines

Consistency: does there exist a solution?

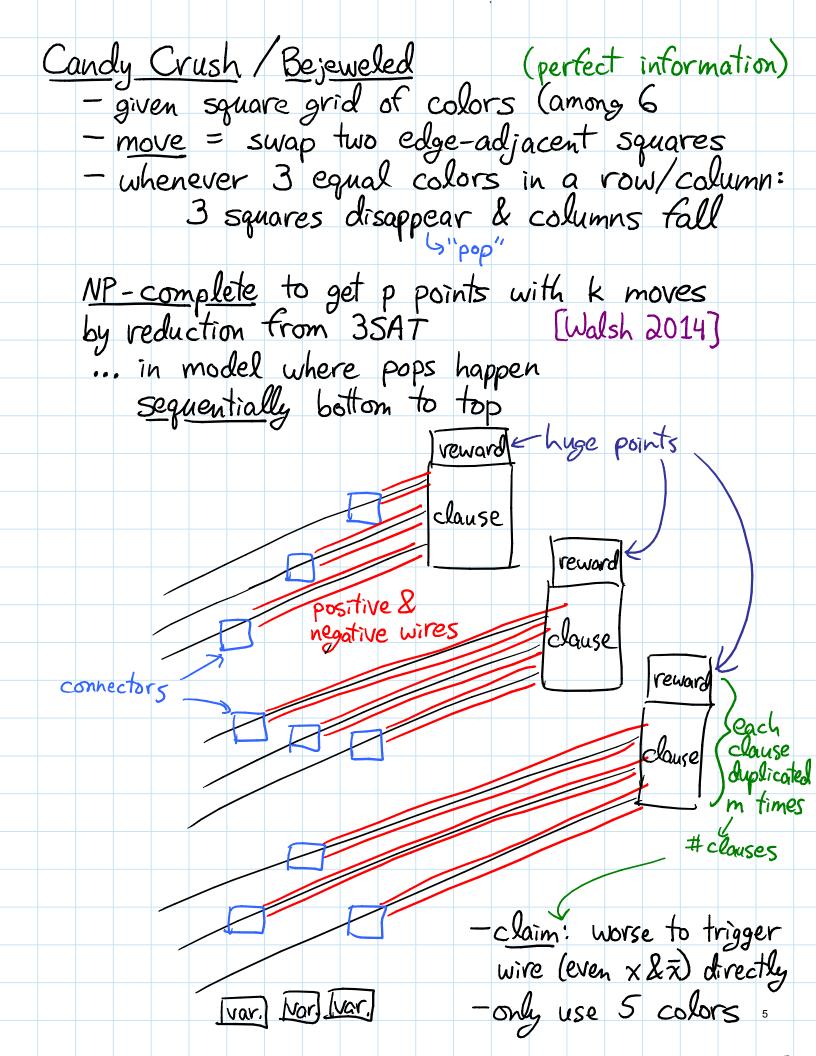

- e.g. see whether mine at x is consistent with (consistent) into so far: if not, play x

-> special case of interest

NP-complete by reduction from Circuit SAT [Kaye 2000]

- wire, terminator
- split/NOT/turn
- phase changer (shift by 2) via 2 NOTS
- crossover gadget: just use NANDs!
  [Goldschlager 1977]

NP-complete with simultaneous pops [Gualà, Leucci, by reduction from 1-in-3SAT Natale 2014] - works for many goals: - p points in k moves - p points -poppgems -p moves - pop a specific gem

6.890 Algorithmic Lower Bounds: Fun with Hardness Proofs Fall 2014
